

Upset Recovery, Spins, Loss of Control, Tailwheel basics

Stalls, spins and aerobatic maneuvers are often feared or misunderstood. Maintaining control of your airplane through all flight regimes will make you a safer and more comfortable pilot. In this event we will discuss how to prevent and recover from unusual attitudes, botched maneuvers, stalls, and spins.

Directions: AeroDynamic's newest location has 30+ tiedown spots in front of our building if you are flying in. We are located near the SE hangars up taxiway Kilo. For drivers, please press the Call button at the gate on Olmsted Way for access.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
